

The **FWC66 Bin Tipper** provides a fast, safe and economical means for tipping 660L or 1100L wheelie bins with either forklift or overhead crane.

The unique **FWC66** Wheelie Bin Tipper has been designed for the emptying of either 660 litre or 1100 litre wheelie bins.

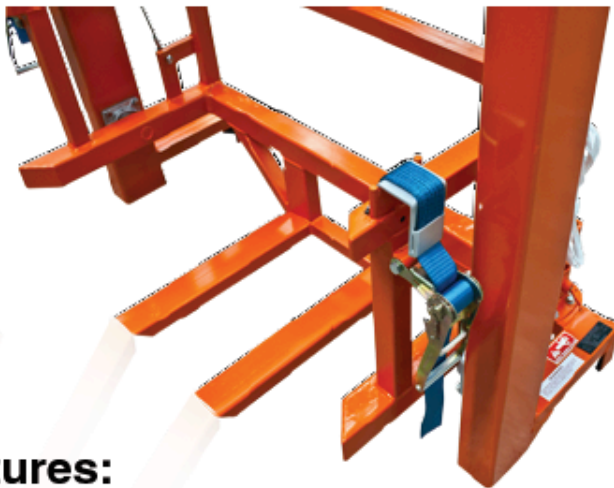

The attachment has been designed in accordance with the relevant Australian Standards and is suitable for operation using either a forklift or overhead crane.

This multi-purpose attachment provides secure operation as the draw cord mechanism allows the forklift or crane operator to position themselves a safe

distance from the bin during the emptying process.

Custom brackets with ratchet tensioners are provided for simple yet secure fastening of the bin to the attachment.

While designed primarily for wheelie bins, other bins may be suitable for use with this equipment, such as 500 litre cube bins. Contact East West Engineering for verification of suitability.

Features:

- Suits both 660L & 1100L bins
- 500kg Working Load Limit
- Suitable for either forklift or overhead crane applications
- Safe Draw-Cord release mechanism
- Ratchet tensioners for simple & secure fastening of bin to attachment
- Designed to relevant Australian Standards

*Waste bins not included - featured for demonstration purposes only
